Description

Learn the basics of B&R Automation Studio, the software for configuring and programming control components in B&R systems. This comprehensive course serves as an ideal introduction to the broad B&R product world and provides hands-on experience for initial commissioning of a programmable logic controller (PLC). You will gain a solid understanding of the functionality of the runtime environment and the built-in configuration and diagnostic options. The knowledge gained is essential for optimizing control systems and ensuring smooth operation. At the end of this course, you will have the necessary knowledge to efficiently set up, program and fine-tune control components using B&R Automation Studio.

Target group

Project planners, programmers, commissioning engineers, maintenance engineers.

Requirements

Basic knowledge of automation technology is desirable.
